Dear Colleagues,

As you may know, ASCLD is the administrator of the US Technical Advisory Group (TAG) for ISO TC 272, which is a technical committee to develop standards for delivery of forensic science services internationally. The technical committee published its first standard in 2016; ISO 18385 Minimizing the risk of human DNA contamination in products used to collect, store and analyze biological material for forensic purposes. ISO TC 272 is presently developing a series of standards for recognition and collection of evidentiary items, analysis, interpretation, and reporting. These standards will be available for future use by forensic science service providers. In addition, ISO TC 272 will develop a standard to reduce the risk of contamination in other consumables used by forensic science service providers.

Currently 24 nations participate in ISO TC 272, with the US participating by representing ANSI as a TAG. The US TAG for ISO TC 272 is a mirror committee to the technical committee at ISO, meaning it operates much like the committee at ISO, only with member stakeholder groups rather than member nations. Former ASCLD Board Kermit Channell (Chair) and Soraya McClung (Secretary), have been instrumental in the establishment and success of the US TAG. Kermit and Soraya developed the US TAG, volunteering to administer the committee since its creation in 2013 when ASCLD created a partnership with ANSI to form and then administer the US TAG.

The US TAG has grown to include various stakeholders in forensic science across the United States, with a common interest in developing standards to improve forensic science globally. Both Kermit and Soraya are moving on to other opportunities and will be replaced with current ASCLD board member Erin Forry (Chair) and Past-President Jody Wolf (Secretary). We are exceedingly grateful to both Kermit and Soraya for their dedication and achievement of the US TAG on behalf of Forensic Science. Thank-you both for your great work and congratulations to Erin and Jody for their new positions.

Ray Wickenheiser
ASCLD President

Registration for the Leadership Academy is now live!
To register, please visit or share the following link: https://www.regonline.com/ASCLDSymposium2018.
The FTCOE is launching its Online Leadership Series we completed in collaboration with ASCLD today! Here are some helpful quick links:

Leadership Resources Post

The website has also been updated so that the Leadership series is the first image shown on the site www.Forensiccoe.org. It is our hope that this becomes a great resource for all in 2018 and beyond!

https://forensiccoe.org/leadership-series/

The **Forensic Technology Center of Excellence** (FTCoE), led by RTI International, is supported through a Cooperative Agreement from the **National Institute of Justice** (NIJ), Office of Justice Programs, U.S. Department of Justice (awards 2016-MJ-BX-K110 and 2011-DN-BX-K564).
The ASCLD reps on the Organization of Scientific Area Committees for Forensic Science (OSAC) Quality Infrastructure Committee’s (QIC) Impact Assessment Task Group are seeking informal feedback from lab directors to assess the laboratory impact of the following proposed standard(s) being considered for inclusion on the OSAC Registry of Standards. This survey should take less than 4 minutes to complete. For further information, and to review each proposed standard, click the appropriate link(s) below. If you have any questions about this process, please contact Impact Assessment Task Group Member Arlene Hall at Arlene.Hall@isp.state.il.us.

Click here for the link to the QIC survey for proposed standard ASTM E2329-17 Standard Practice for Identification of Seized Drugs: https://goo.gl/forms/ScDdQQLSpaDJPeyD3.
NOTE: Access to this proposed standard and the formal public comment period closes on January 6, 2018. The associated QIC survey will also close at that time. Please participate; your feedback is important.

Dear Forensic Science Professionals,

The topic of “bias” and its implications for forensic practice has been hotly debated and researched in forensic and academic circles over the last decade. The 2009 National Academy of Sciences (NAS) report on the state of forensic science in the USA and the 2016 President’s Council of Advisors on Science and Technology (PCAST) report on forensic science recommend that forensic practitioners address issues relating to bias in forensic science and provide evidence to the fact finder that they have done so.

This workshop uses an engaging and innovative mixture of lectures, case examples, and practical activities to educate participants on the theoretical concepts and practical implications of bias within forensic science. Participants will receive instruction on the various types of bias, how to identify its presence, how to mitigate its influence, methods on how to sequentially unmask data, procedures used to identify task-relevant information, concepts for the appropriate management of case-specific contextual information and how to appropriately document critical decision pathways.

This workshop is primarily aimed at forensic science practitioners both scene or laboratory based, especially those involved in the early identification, collection and interpretation of evidence. It is however designed to benefit anyone who produces, uses or relies upon forensic science for decision making purposes within the justice system, including judges, district attorneys, defense lawyers, and detectives.

The workshop is $395 per person.

For registration, please visit: http://www.cedarcrest.edu/forensic/18/2.htm

Shaheen, Cornyn Call on DOJ to Provide Guidance on Boosting Support for Forensic Labs in Efforts to Combat Opioid Epidemic

(Washington, DC) – Today, U.S. Senators Jeanne Shaheen (D-NH) and John Cornyn (R-TX) led a letter with a bipartisan group of 30 senators to U.S. Attorney General Jeff Sessions, asking him to provide Congress with information detailing how the Department of Justice (DOJ) is supporting and prioritizing forensic science service providers across the nation as a part of a broader approach to combat the opioid epidemic.

“The opioid crisis knows no boundaries; it reaches into homes in every community in every region of this country. Stopping the flow of these drugs is critical to ending the crisis, but to do so requires the ability to trace the drugs to their source. This demands a forceful and vigorous effort by our forensic science community,” wrote the senators.

The senators continued, “The current opioid crisis has overwhelmed the nation’s collective laboratory systems with more than a 6000% increase in the last four years, according to National Forensic Laboratory Information System (NFLIS) data provided by the American Society of Crime Laboratory Directors. Case backlogs and turnaround times are growing. Dangerous emerging drugs are not being scheduled to make them illegal, and deaths likely associated with drug overdose are not being investigated completely by medical examiners and coroners.”

The bipartisan coalition of senators call on the DOJ to provide a comprehensive list to Congress within 30 days, detailing how the Department is supporting and prioritizing forensic science service providers, and to also explain how the Department is including grant programs and technical assistance for providers at the state, county and local levels to help combat the public health crisis. The forensic science community plays a critical role in communities affected by the opioid epidemic. Labs and other forensic science service personnel help local law enforcement and federal agencies trace drugs to their source by helping to analyze evidence, find importers, manufacturers and distributors, and to determine causes of death in overdoses.

Senator Shaheen, the lead Democrat on the Appropriations Commerce, Justice, Science and Related Agencies Subcommittee, and Senator Hassan introduced legislation to help the State Police Forensic Laboratory and Office of the Chief Medical Examiner in New Hampshire and their counterparts across the country that are dealing with dramatically increased demands and serious backlogs as a result of the opioid epidemic. Earlier this month, Senator Shaheen sent a letter to President Trump with a group of 19 senators, calling on the President to support additional funding necessary to combat the opioid epidemic. Senator Shaheen has been leader in Congress on combating the opioid crisis, and was instrumental in efforts to obtain emergency funding through the 21st Century Cures Act that was signed into law by President Obama last year. Earlier this year, she helped secure over $700 million in additional opioid treatment resources. Shaheen recently helped unveil legislation that would provide $45 billion to respond to the opioid crisis, which is the largest response bill to combat the epidemic to date.

The bipartisan group supporting Senators Shaheen and Cornyn’s letter include Senators Maggie Hassan (D-NH), Tammy Baldwin (D-WI), Richard Blumenthal (D-CT), Cory Booker (D-NJ), John Boozman (R-AR), Sherrod Brown (D-OH), Thad Cochran (R-MS), Susan Collins (R-ME), Christopher Coons (D-DE), Mike Crapo (R-ID), Ted Cruz (R-TX), Dianne Feinstein (D-CA), Al Franken (D-MN), Chuck Grassley (R-IA), Orrin Hatch (R-UT), James Inhofe (R-OK), Angus King (I-ME), Amy Klobuchar (D-MN), James Lankford (R-OK), Patrick Leahy (D-VT), Joe Manchin (D-WV), Ed Markey (D-MA), Lisa Murkowski (R-AK), Bob Portman (R-
OH), James Risch (R-ID), Mike Rounds (R-SD), Marco Rubio (R-FL), Thom Tillis (R-NC), Chris Van Hollen (D-MD) and Sheldon Whitehouse (D-RI).

The letter can be read in full here.

45th Annual ASCLD Symposium

Advancing Forensic Science requires leadership, which includes taking initiative, motivating employees, and applying resources creatively to the complex problems presented by today's forensic casework and issues. Leaders lead by example and encouragement, building on success and learning from their past experiences and that of others.

Please join us in Atlanta, Georgia, May 20-24th for the 2018 ASCLD Symposium where you will learn about exciting initiatives to advance forensic science. New and experienced managers and directors will be presented with innovative tools to sharpen their leadership skills. Presentations from experts and leaders, both inside and outside the forensic science community, will cover various aspects of leadership. Our goal is to invigorate you with techniques and information to increase your leadership capacity in both life and occupation.

Hotel Information

Atlanta Marriott Marquis

Located in the heart of downtown Atlanta, within walking distance to renowned Atlanta attractions including the Georgia Aquarium, World of Coca-Cola and College Football Hall of Fame, the Atlanta Marriott Marquis is unparalleled in its splendor and convenience.

The indoor MARTA access provides fast rail access to the Hartsfield-Jackson Atlanta International Airport, while the downtown location offers first-class opportunities for experiencing Atlanta.

During your stay, enjoy the iconic cocktail lounge Pulse, dine at the unique restaurants including Sear and High Velocity, and pamper yourself in the state-of-the-art full service spa.

265 Peachtree Center Avenue
Atlanta, GA 30303
(404) 521-0000

Hotel Rate

- The room rate for this event is $135.00 plus taxes and fees
- The contracted rate will be available until 5 PM EST, Friday, April 27, 2018

Reservation Process

JOB OPPORTUNITIES (Hiring now)

Due to an recent upgrade with the newsletter software, visit http://www.ascld.org/jobs2 to link and view details about job announcements listed below.

- **Forensic Chemist**, Georgia Bureau of Investigation, Decatur, Expires: February 28, 2018
- **Forensic Biologist – Crime Lab Scientist**, Georgia Bureau of Investigation, Decatur, GA & Moultrie, GA, Expires: February 28, 2018
- **Forensic Biologist – Crime Lab Scientist**, Sedgwick County, Wichita, Kansas, Expires: January 26, 2018
- **Forensic Scientist – Firearms & Toolmarks**, Virginia Dept. of Forensic Science, Manassas, VA, Expires: December 29, 2017
- **Forensic Toxicologist**, Virginia Dept. of Forensic Science, Manassas, VA, Expires: January 3, 2018
- **Forensic Scientist II -DNA**, Scottsdale Police Department Crime Laboratory, Scottsdale, Arizona, Expires: December 30, 2017
- **Forensic Scientist – Controlled Substances – Northern Lab**, Virginia Dept. of Forensic Science, Manassas,
Assistant/Associate/Full Professor in Forensic Science, Arizona State University, Glendale, Arizona, Expires: January 31, 2018

Assistant/Associate Professor, University of New Haven, West Haven, Connecticut, Expires: February 8, 2018

Assistant Biometric Records Manager, Pinellas County Sheriff's Office, Largo, Florida, Expires: February 8, 2018

Assistant/Associate Professor, University of New Haven, West Haven, Connecticut, Expires: February 8, 2018

Forensic Chemist, InCadence Strategic Solutions, Forest Park, GA, Expires: January 31, 2018

Biometric Records Manager, Pinellas County Sheriff's Office, Largo, Florida, Expires: December 25, 2017

Senior Firearm/Toolmark Examiner (Senior Criminalist – Firearms), Tarrant County Medical Examiner Criminalistics Laboratory, Fort Worth, TX, Expires: January 5, 2018

Principal Chemist – Radiological/Nuclear (01597), ORAU, Charlottesville, VA and OCONUS, Expires: January 2, 2018

Senior Chemist (01603), ORAU, Charlottesville, VA and OCONUS, Expires: January 2, 2018

Staff Chemist – Radiological/Nuclear (01610), ORAU, Charlottesville, VA and OCONUS, Expires: January 2, 2018

Associate Chemist – Radiological/Nuclear (01591), ORAU, Charlottesville, VA and OCONUS, Expires: January 2, 2018

Principal Microbiologist (01601), ORAU, Charlottesville, VA and OCONUS, Expires: January 2, 2018

Senior Microbiologist (1609), ORAU, Charlottesville, VA and OCONUS, Expires: January 2, 2018

Staff Microbiologist (01596), ORAU, Charlottesville, VA and OCONUS, Expires: January 2, 2018

Associate Microbiologist (01595), ORAU, Charlottesville, VA and OCONUS, Expires: January 2, 2018

Assistant/Associate Professor of Forensic Science, Sam Houston State University, Huntsville, TX, Expires: December 31, 2017

Forensic Examiner DNA 3 (#01377), ORAU, Ft. Gillem, GA (& OCONUS), Expires: December 31, 2017

Forensic Examiner DNA 1 (#01376), ORAU, Ft. Gillem, GA (& OCONUS), Expires: December 31, 2017

Forensic Examiner Latent Print 1 (#01375), ORAU, Ft. Gillem, GA (& OCONUS), Expires: December 31, 2017

Forensic Examiner Latent Print 3 (#01374), ORAU, Ft. Gillem, GA (& OCONUS), Expires: December 31, 2017

Forensic Chemist (#01373), ORAU, Oak Ridge, Expires: December 31, 2017

Laboratory Manager/Theater Liaison (#01365), ORAU, Ft. Gillem, GA (& OCONUS), Expires: December 31, 2017

Laboratory Manager/Theater Liaison, MISS, Oak Ridge, Expires: December 31, 2017

Forensic Examiner – Firearms & Toolmarks (#01378), ORAU, Ft. Gillem, GA (& OCONUS), Expires: December 31, 2017

Forensic Scientist I-Firearms/Toolmarks/Ballistics, Nassau County Medical Examiner Division of Forensic Services, East Meadow, NY, Expires: February 2, 2018

Forensic Scientist II-Firearms/Toolmarks/Ballistics, Nassau County Medical Examiner Division of Forensic Services, East Meadow, NY, Expires: February 2, 2018

Forensic Scientist III-Firearms/Toolmarks/Ballistics, Nassau County Medical Examiner Division of Forensic Services, East Meadow, NY, Expires: February 2, 2018

Forensic Scientist IV-Firearms/Toolmarks/Ballistics, Nassau County Medical Examiner Division of Forensic Services, East Meadow, NY, Expires: February 2, 2018

Forensic Scientist I-Trace Evidence, Nassau County Medical Examiner Division of Forensic Services, East Meadow, NY, Expires: February 2, 2018

Forensic Scientist I-Trace Evidence, Nassau County Medical Examiner Division of Forensic Services, East Meadow, NY, Expires: February 2, 2018

Forensic Scientist II-Trace Evidence, Nassau County Medical Examiner Division of Forensic Services, East Meadow, NY, Expires: February 2, 2018

Forensic Scientist III-Trace Evidence, Nassau County Medical Examiner Division of Forensic Services, East Meadow, NY, Expires: February 2, 2018

Forensic Scientist IV-Trace Evidence, Nassau County Medical Examiner Division of Forensic Services,
Workplace Hazards
by Jane Northup

Required Information provided to lab personnel working with hazardous substances

The elements of a Chemical Hygiene Plan (CHP) have been the subject over the last few weeks. Previous topics have been 1) the need for SOPs (Standard Operating Procedures), 2) Criteria for Implementing Control Measures, and 3) requirement to ensure that fume hoods and other protective equipment are functioning properly and identify the specific measures the employer will take to ensure proper and adequate performance of such equipment. This week we will cover topic 4) Required Information to be provided to lab personnel working with hazardous substances

- Provide laboratory personnel information and availability of the Laboratory Standard and its appendices. The Laboratory Standard is 29 CFR 1910.1450—Occupational Exposure to Hazardous Chemicals in Laboratories. This document may not be applicable to forensic labs in its entirety, but several chemicals listed in the standard do pertain to forensic lab use. For example, methanol, commonly used in forensic labs, is a chemical requiring OSHA consideration.
- The lab's location and availability of the employer's CHP must be addressed in policies. As discussed in previous installments, the CHP (Chemical Hygiene Plan) is a written program stating the policies, procedures and responsibilities that protect workers from the health hazards.
- Knowledge of the permissible exposure limits (PELs) for OSHA regulated substances or recommended exposure limits for other hazardous chemicals where there is no applicable OSHA standard. Many chemicals used in a forensic lab have exposure limits. If proper procedures such as fume hoods are used, these limits would not be experienced by an analyst. This is of particular importance if a chemical is spilled and there is an inadvertent exposure to the chemical. Make sure that employees know which chemicals in use would trigger the need to know how much someone can be exposed without health ramifications.
- Know the signs and symptoms associated with exposures to hazardous chemicals used in the laboratory. Signs and symptoms of exposure to hazardous chemicals are explained in the SDS of each chemical. Make sure that all employees have read the SDS prior to working with the chemical and know where to go for the SDS’s during an emergency. A person exposed to a chemical should go to the hospital with the SDS in hand so that all emergency personnel know how to treat the afflicted.
- Know the n.dines, ree,edldsand,eyadme/Lab personnel MUST know the location of the SDS’s, have read them prior to using a hazardous chemical, know where all safety manuals, equipment and supplies are located, and have knowledge if the lab has additional reference material pertaining to the chemicals, such as reference manuals for procedures used. This information may be in hard copy or online, but the lab worker should have quick access and should not be password protected.

In 2018, the Forensic Science Training Institute will be offering a week-long course in Advanced Fabrics Bloodstain Pattern Analysis Training on March 19-23.

The class size is limited to twelve, so please register early to ensure your seat.

For registration and full details on the course requirements, visit the Forensic Science Training Institute website here: http://www.cedarcrest.edu/forensic/16/1.htm

**Recorded Training:**

**Episode 9 Podcast!!**
**Just Blood Spatter**

In episode nine of Just Science, funded by the National Institute of Justice’s Forensic Technology Center of Excellence [Award 2016-MU-BX-K110], we spoke with Dr. Marc Smith, from the Georgia Institute of Technology. Dr. Smith's NIJ funded research in blood spatter has connected computational fluid dynamics with empirical studies to improve the understanding of blood spatter onto solid, slanted surfaces. His work looks at many variables, including droplet size, speed, surface roughness and wettability. Listen and Subscribe HERE.

Forensic Science in the News

What new forensic science reveals about JFK assassination
One of the main questions around the Kennedy assassination was whether Lee Harvey Oswald was the only person shooting at the president in Dallas that November day in 1963. Investigators had found three bullet casings on the sixth floor of the Texas School Book Depository, where Oswald had been shooting from. Audio evidence found there had been another shooter who had fired once.

New NIST forensic tests to ensure high-quality copies of digital evidence
The software suite, referred to collectively as federated testing tools, is designed to help law enforcement and forensic practitioners with a critical early step in evidence collection: making a copy of the data from a seized electronic device. Because a suspect's guilt or innocence can hang in the balance, both the prosecution and the defense must agree that the digital forensic process did not introduce any unseen errors into the data, and that the methods they are using work as expected.

Orange County's Informant Scandal Yields Evidence of Forensic Science Deception in Murder Trials
Except for a disturbing fact—the presence of Nicholas, a bloody, bound, diaper-soiled, crying 2-year-old sitting on the kitchen floor without supervision—Catherine Tameny's modest one-bedroom apartment situated between the Disneyland and Knott's Berry Farm amusement parks looked deceptively neat upon opening the front door.

Scientists Shoot Human Heads Filled With Cow Blood for Science
The researchers successfully filled one of the heads up with 200 mL of cows blood, specially treated so as not to clot. The other head couldn't be fully re-infused, probably due to some decomposition. The team then placed both the cadavers and a blood-soaked sponge in front of white, open, and upright boxes and shot a fixed pistol from behind the box to measure the backspatter patterns left by the head and sponge.

5 Important Tools Used by Forensic Scientists

What's the deal with Saint Lucia's Forensic Science Lab?
Though a new year is approaching, bringing with it a clean slate for crime statistics, residue from 2017’s most hideous crimes will surely spill into 2018. For family and friends of victims, as well as members of the wider public fixated on justice, the outcome of rape, murder and other ongoing cases will continue to be anticipated, hopefully soon, with the added assistance of a fully functioning Forensic Science Laboratory.

New NIST Forensic Tests Help Ensure High-Quality Copies of Digital Evidence
Washington, DC - Data found on a suspect’s computer, cell phone or tablet can prove to be crucial evidence in a legal case. A new set of software tools developed at the National Institute of Standards and Technology (NIST) aims to make sure this digital evidence will hold up in court.

Vernon cold-case unit seeking help with teen's 1980 murder
Vernon Parish Sheriff Sam Craft’s new cold case investigative team is seeking help solving the 1980 murder of a Sandy Hill-area teenager as well as other unsolved homicides in the parish.

This machine that analyses art can also be used to solve crime
One of the shortfalls of traditional forensic science is the struggle to detect and image biological traces, like blood and sperm, from a surface too dark or fluorescent. This new CSI technique, however, can detect traces on any surface with ease, and it could even help to solve old crimes.

Defense Takes Over During Eighth Day of the Civil Trial of the Homicide of Shirley Carter
The defense then called their first witness, Independent Forensic Science Consultant Gary Rini to the stand. Rini told the jury about the different methods used for investigating a crime scene and was asked questions regarding the crime scene photos. Rini told the jury he had no opinion as to if the scene was a staged burglary but during cross examination was shown that he had stated in a November report he believed the scene to be staged. Rini suggested that there were problems with the DCI investigation of the scene.
ASCLD Crime Lab Minute December 26, 2017

San Joaquin Co. attorneys call for separation of sheriff, coroner's offices

16 attorneys practicing in San Joaquin County submitted a signed letter today to the San Joaquin County Board of Supervisors and County Administrator's Office today calling for the separation of the county's sheriff's and coroner's office.

More than 34,000 family court cases 'may have been hit by forensic tampering scandal'

This week the National Police Chiefs Council announced 10,000 criminal cases in England and Wales dating back to 2010, including rapes and murders, are being reviewed after two forensic scientists were arrested on suspicion of manipulation of drug and alcohol tests.

A New Scientific Technique Reveals How Ancient Humans Made Art

Developed by Loanna Kakoulli, a professor of materials science and engineering at UCLA, and John Delaney, an imaging scientist at the National Gallery of Art, the technique allows researchers to map the molecular and elemental composition of a painting's surface and determine the materials used by the artist and the order in which they were applied. It also puts the work into historical and geographical context, revealing how and when the artist's paints were made.

Real-life CSI: New device could help bomb squads 'catch the bad guys'

Some in law enforcement have called it a game-changer: one-state-of-the-art portable device that could be used in investigations of bomb blasts and violent crime scenes, and maybe even in space explorations.

State crime lab braces for impact of new DNA profiling law

Starting in January, suspects arrested on probable cause for any felony charge will open themselves to scrutiny in other cases, thanks to Indiana's new DNA profiling legislation.

New York City Council Members Grill Crime Lab Officials About Unregulated DNA Database

New York police and crime lab officials faced tough questions Thursday about whether a large, unregulated DNA database built in part to solve more gun cases violates the civil rights of the people whose profiles are in it.

Sheriff's office will continue to manage Hennepin Co. Crime Lab

At a Hennepin County Board of Commissioners meeting Tuesday, Commissioner Marion Greene backed off on her proposal to put county administrators in charge of the crime lab, which is responsible for processing evidence for 44 cities in Hennepin County.

Local crime lab to add forensic robot

The Anoka County Board Oct. 24 accepted a 2017 DNA capacity enhancement and background reduction program grant from the U.S. Department of Justice, Office of Justice Programs, totaling $150,000 effective Jan. 1, 2018 through Dec. 31, 2019.

New State Crime Lab to Focus on Drug, DNA Evidence

State Attorney General Josh Stein attended last week the inauguration of the State Crime Lab office for western North Carolina in Edneyville this weekend. The new regional crime lab, unlike one in Asheville since the 1980's, relieves the burden of DNA evidence testing from the main lab in Raleigh, which was previously the only facility with that capacity.

Officials break ground on new Hamilton County crime lab

Hamilton County Coroner Lakshmi Sammarco has been pushing for a new crime lab for five years.

Indictment of Man Charged in 8 Killings Stalled by Crime Lab Shortage

Lincoln County District Attorney Dee Bates tells The Daily Leader that a shortage of pathologists at the state crime lab means autopsy reports haven't been finalized.

El Paso District Attorney asking for new chemist in crime lab to reduce DWI backlog

Facing a backlog of DWI cases, El Paso County leaders are discussing hiring a new chemist to test blood work.

Sentencing hearing scheduled Monday for woman accused in DUI crash that injured six children

A woman who investigators say was driving drunk, causing a crash that injured six children will have a sentencing hearing on Monday at 2 p.m.

Urbana police uncover large indoor marijuana operation

Multiple officers acting with a search warrant raided a home in the 300 block of Boyce Street on Thursday, Dec. 7, according to information from the Urbana Police Division. Police said they uncovered evidence of several drug crimes, including an alleged large indoor marijuana growing operation that took up a large portion of the building's interior.

Box containing children bones and teeth found in Missoula shed

Missoula Police have a "person of interest" concerning a box they found that contains bones and teeth, believed to be from three children, in a Missoula shed in September.

NM IJP in court on Monday: New DNA evidence proves innocence of client

The New Mexico Innocence Project at the UNM School of Law took the case in 1987, and on Monday, December 11, the Second Judicial District Court in Albuquerque heard IJP's Motion to Dismiss the case and conviction against Duran.

Suspect who sent 21-month-old to hospital for bruising, brain bleeds faces child rape charges

A Spokane Valley man now faces first degree rape of a child charges in addition to assault of a child charges.

Virtual Case Notes: Raped Through the Internet—Swedish Man Convicted in Unprecedented Case

But the dark side of this connectedness was highlighted late last month, when a Swedish court ruled that a man who had coerced children in other countries to perform sex acts on a webcam was guilty of the crime of rape. On Nov. 30, Bjorn Samstrom, 41, became the first person in Sweden convicted of rape for offenses committed solely over the internet, according to the Associated Press.

Photographing Impression Evidence

For crime scene investigators, processing a scene entails recognizing evidence, note taking, scene photography, measurements, evidence collection and submission. It also includes searching for and developing impression evidence, such as fingerprints, palm prints, footprints, tool marks, footwear impressions, tire tracks and other forms of impressions. Not every impression can be collected in place, lifted or cast. While all evidence requires
photographic documentation prior to recovery, in many instances photography is the only way to recover the evidence itself. Anyone who has used photography to recover impressions knows the process is much more involved than simply taking a picture. In this article, I’ll discuss some of the keys to photographing impression evidence.

**Automated Sample Storage Methods Reduce Risk**
Manually managing an extensive repository of evidentiary DNA samples and small biological samples can be time-consuming, contributing to a slowdown in overall laboratory efficiency. This issue is compounded in forensic laboratories by sample overcrowding due to legislation and best practice guidelines stipulating that DNA samples be retained throughout the incarceration period, until statute of limitations expiration or even indefinitely, depending on the crime and jurisdiction.

**Dutch Police Make Arrest in Cold Case Murder After Mass DNA Collection from Over 100 Men**
The man accused of raping and stabbing Milica van Doorn before dumping her body in a pond in the city of Zaandam in the Netherlands was one of only two men who refused to give a DNA sample after police asked 133 men to volunteer, but was discovered through a relative who did volunteer, according to DutchNews.

**Swedish Serial Shooter ‘Laserman’ Transported to Germany for Trial in 1992 Unsolved Murder**
The far-right terrorist who shot 11 people in and around Stockholm in the early 1990s has been shipped to Germany to stand trial for the unsolved 1992 murder of an elderly Holocaust survivor.
John Ausonius, dubbed “Laserman” for the laser-sighted rifle he initially used for his attacks, is already serving a life term in a Swedish prison for the attacks in his home country, which left one dead and 10 seriously wounded from August 1991 to January 1992.

**LA Police Probe Claim Roman Polanski Molested Girl in ’75**
Los Angeles detectives said Tuesday they are investigating a woman's claim that Oscar-winning director Roman Polanski molested her in 1975, when she was 10 years old. But the allegations are so old that criminal charges couldn't be brought, even if proven.

**Photos Can Be Traced to Individual Smartphones, Opening Up New Ways to Prevent Cybercrime**
"Like snowflakes, no two smartphones are the same. Each device, regardless of the manufacturer or make, can be identified through a pattern of microscopic imaging flaws that are present in every picture they take," says Kui Ren, the study's lead author. "It's kind of like matching bullets to a gun, only we're matching photos to a smartphone camera."

**Defendant in Football Player’s Death Says He Fired Into Air**
Jurors in a murder trial involving the 2015 death of a Tennessee high school football player who shielded friends from gunfire heard an interview Monday in which one defendant tells police he fired shots in the air without aiming at anyone that night.

**‘Making a Murderer’ Nephew’s Confession Upheld by Federal Court**
More than a year after the murder conviction of Brendan Dassey was tossed by a federal judge, a split appeals court has now upheld the pivotal confession the then-16-year-old made to two Wisconsin detectives—one of the details in the case that fueled the arguments made in the popular Netflix series "Making a Murderer" two years ago.

**New Stanford Study Analyzes Recent Research on Causes of Gun Violence**
Researchers from Stanford and Duke University examined recent studies on the causes of gun violence in the United States in an effort to find consensus in a body of research that often covers different states or different time periods, making conclusions difficult to draw.
Organization of Scientific Area Committees for Forensic Science
Annual Report 2017

Bode Cellmark Forensics provides advanced forensic solutions offering crime labs ways to reduce their workloads and budgets.

Bode’s newest offerings include:
- Sexual Assault Kit Backlog Reduction Program
  streamlines processes to eliminate backlogs of

OSAC Subcommittees
https://www.nist.gov/topics/forensic-science/osac-subcommittees
Introduction

This course is designed primarily for practitioners who routinely examine blood stained clothing and other textiles and are required to assess, interpret, and report on bloodstain patterns as part of those examinations. The course is delivered through a combination of “face to face” instruction and self-directed learning. A minimum 80 hours of structured learning activities is required, inclusive of a 40 hour “face to face” residential component. The course will review the underpinning principles of BPA, and apply these principles to the untested sexual assault kits.

Bode Buccal 2™ is uniquely designed to improve DNA databanking collecting and automate processing. The Bode Buccal 2 is a DIRECT COLLECTION SYSTEM that requires minimal training. There is NO Transfer Step Required.

Independent Validation Services are customized to meet your laboratory’s needs. Validation services provide completely unbiased analysis on your equipment, chemistries, or process.
analysis and interpretation of bloodstains on clothing and other textiles.

When examining clothing, the practitioner must be mindful of influences such as the fibre type, texture, treatments, all of which may affect the final appearance of bloodstains. The primary focus of the course is to develop those skills required for the examination of bloodstain patterns found on clothing items, including the use of microscopy to discriminate between spatter and transfer bloodstains.

FORESIGHT 20/20

Greetings from the Project FORESIGHT team. We invite you to join us and submit data for the past fiscal year.

FORESIGHT is a business-guided self-evaluation of forensic science laboratories across the globe. The participating laboratories represent local, regional, state/provincial, and national agencies. Faculty from the WVU College of Business and Economics provide assistance, guidance, and analysis. We link financial information to work tasks and functions. Laboratory managers can use these functions to assess resource allocations, efficiencies, and value of services—the mission is to measure, preserve what works, and change what does not.

FORESIGHT is open to any forensic laboratory that completes and submits a LabRAT form. There is no charge for participation. Attached you will find an example of an individualized report prepared for a participating laboratory.

To participate, simply complete the attached LabRAT workbook and submit to Paul Speaker at email paul.speaker@mail.wvu.edu. Please send any questions to the same email address. For additional information, please visit the program web site http://be.wvu.edu/forensic/foresight.htm.

We are targeting a submission date of December 15, 2017.

NIJ Forensic Science R&D Reports for ASCLD Crime Lab Minute Vol 11

These research reports have been submitted by the National Institute of Justice (NIJ) especially for their relevance to crime laboratory activities. ASCLD has not reviewed nor does it necessarily endorse the findings of this research.

NIJ-FBI Fingerprint Partnership Identifies 200 Missing Persons

In March of this year, a new collaboration began between the National Institute of Justice and the FBI Laboratory. Fingerprints
CALL for ABSTRACTS and CALL for WORKSHOPS are now open

Call for ABSTRACTS closes October 13th, 2017

Call for WORKSHOPS closes October 18th

Registration for attendees and presenters is FREE!

Attendee Registration will be opening soon.

All selected domestic presenters, except federal employees, will be funded for this event. Funding includes airfare and lodging that is arranged and prepaid by RTI. Other travel related expenses such as meals (at per diem rate), taxi, mileage and parking will be reimbursed following the workshop. Further detail will be provided to those selected with acceptance letters. International travel will not be funded.

For more information and to submit your abstract(s) or workshop proposal(s) please go to: http://www.forensiccoe.org/workshop/18-IPTES

For questions please contact forensicCOE@rti.org.

The Fingerprint Sourcebook is Now Available in Spanish

NIJ has released a Spanish-language version of The Fingerprint Sourcebook, which aims to be the definitive resource on the science of fingerprint identification. The Sourcebook was prepared by the International Association for Identification and topics covered include the anatomy and physiology of friction ridge skin; techniques for recording exemplars from both living and deceased subjects; AFIS; latent print development, preservation and documentation; equipment and laboratory quality assurance; perceptual, cognitive and psychological factors in expert identifications; and legal issues.

Forensic Identification Using Individual Chemical Signatures

NIJ-funded researchers developed an approach to translate chemical signatures recovered from personal objects such as phones into a lifestyle sketch of the owner, using mass spectrometry and informatics approaches.

Quantifying Error Rates for the Measurement of Human Skeletal Remains

NIJ-funded researchers revised forensic anthropology procedures to include an “error metric” for the measurement of human skeletal remains. This article summarizes findings from that study.

Designing Methods to Identify Evolving Designer Drugs

This article describes an NIJ-supported research project focused on issues of resolution and discriminatory capabilities needed to increase the reliability and selectivity of forensic evidence and analytical data for new bath salt-type drugs of abuse.

Standardized Process Developed for Identifying Dyes in Fibers

This article summarizes method with the twofold purpose of producing a novel, reliable, and useful microfluidic system for fabric dye extraction and increasing the knowledge needed to guide criminal justice policy and practice related to the forensic analysis of dyed fabric.

The Most Important Features for an Effective Sexual Assault Response Team

The National Institute of Justice recently released a report on National Best Practices for Sexual Assault Kits: A Multidisciplinary Approach in response to the Sexual Assault Forensic Evidence Reporting (SAFER) Act of 2013, which focuses on the accurate, timely, and effective collection and processing of DNA evidence in sexual assault investigations. A practitioner working group developed 35 recommendations that provide a roadmap for collecting, transferring, preserving, storing and analyzing sexual assault kits. The recommendations apply to medical professionals, members of law enforcement, victim advocates, prosecutors and laboratories. A coordinated, collaborative and multidisciplinary approach to sexual assault investigations helps reassure and support victims of sexual violence, encourages victim engagement and increases the potential for just legal resolutions.

National Institute of Justice Awards

National Institute of Justice's latest Graduate Research Fellowships in Science, Technology, Engineering, and Mathematics. NIJ has made 20 new awards in 2017 for STEM fellows, totaling $960,861 for graduate students working towards advancing NIJ's mission. The GRF-STEM program funds dissertation research across a wide range of topics to criminal justice, including the forensic sciences.

See a full list of awards and descriptions, awardees, and dollar amounts. Sign up to get email notices when NIJ releases GRF and other funding solicitations.

Canadian Forensic Science Journal

Sexual Assault Response Teams (SART) hold the promise of improving victim experiences, increasing prosecution rates, and reducing the prevalence of sexual assault. To understand how an effective SART works, NIJ-funded researchers studied the structure and operations of SARTS across the United States.

Identifying Ignitable Liquids in the Aftermath of A Fire

In a wide-ranging analysis of the effects of weathering and biological degradation on ignitable liquids, NIJ-supported researchers at the University of Central Florida's National Center for Forensic Science studied and classified 50 liquids in the Ignitable Liquids Reference Collection database.

Scale Modeling in Fire Reconstruction

After reviewing scaling theory used in fire research, this project developed scaling rules for design fires and enclosure material boundaries, followed by the full-scale testing of a gas burner, heptane pool fire, pine wood crib, and polyurethane foam, and the scaling theory was applied to the full-scale scenario and a 1/8 scale compartment.

Evaluation of the Use of a Non-Contact 3D Scanner for Collecting Postmortem Fingerprints

Historically, the recording of postmortem fingerprint impressions from decedents is a manual and labor-intensive process. 3D scanners are potentially an important tool to help forensic scientists address the challenges of postmortem fingerprint recovery due to the contactless scanning capabilities, as well as the ability to scan complex surfaces and capture scale. This NIJ-supported study evaluated the potential for using a contactless, 3D fingerprint scanner to capture examination-quality postmortem fingerprints and facilitate rapid identification of the deceased.

Evidential Value of Particle Combination Profiles on Common Items of Evidence

This project used the analytical tools and statistical methods developed in previous research funded by NIJ to measure the evidential value of very small particle (VSP) profiles found on four common types of physical evidence: handguns, cell phones, drug packaging, and ski masks.

Method Development and Validation of Toolmark Imaging, Virtual Casing Comparison, and In-Lab Verification using a GelSight-Based Three Dimensional Imaging and Analysis

Stemming from a previous project that developed a 3D surface topography imaging and analysis system for casings based on the GelSight scanning technology and custom feature-based image comparison, this NIJ-supported project aimed 1) to develop the ability to scan and compare firing pin impressions; 2) to examine the use of the imaging and analysis technology in a live lab experiment; and 3) to investigate Virtual Microscopy, the use of measured 3D surface topographics as a substitute for physical casings.
