Dear Colleagues,

It is our pleasure to announce the opening of registration for our Annual Meeting in Atlanta, Georgia, from May 20-24, 2018. The link to the symposium website is: https://www.ascldsymposium.com/. Please take this opportunity to plan to meet with your fellow forensic leaders, to share new ideas, issues and solutions, to hear engaging presentations and also to share some comradery, network and enlarge your list of contacts. As a leadership group, we bear responsibility to be stewards of our field of forensic science, which includes sharing resources to bring the best of the forensic world back to our home jurisdictions and cases.

Along with registration, the meeting agenda has also been posted at: https://www.ascldsymposium.com/agenda-cqfe. The focus of this year’s meeting is leadership, with our theme Leading Forensic Advancement: A Formula for Success. You will see the topic of leadership evident throughout the array of engaging and informative workshops scheduled for Sunday and Monday, followed by an outstanding plenary session Tuesday through Thursday. Highlights of the plenary session include high level outside speakers and panels on accreditation and developing staff.

This year we have made notable schedule changes, including moving the Awards Banquet luncheon to Thursday from 1:30-3:00 to ensure maximum attendance. Please include attending the Banquet in your travel plans as we will present an expanded set of awards and special speakers. A lot of planning and effort goes into our annual meetings, to ensure you have the best experience possible, including arming you with the best tools to take back to improve your lab. Please join your colleagues in Atlanta. See you there!

Ray Wickenheiser
ASCLD President
Subject: CSAFE Survey on Current Forensic Reporting Practices

You are being asked to participate in a research study on forensic reporting practices. The purpose is to understand how forensic results are being reported in crime laboratories right now.

The survey is being administered by The Center for Statistics and Applications in Forensic Evidence (CSAFE).

As you probably know, CASFE was named a Forensic Science Center of Excellence by the National Institute of Standards and Technology to "support NIST's efforts to advance the utility of probabilistic methods to enhance forensic analysis." CSAFE has partnerships with many forensic laboratories including the Midwest Forensic Resource Center.

You will be compensated for your participation in this research study with attractive CSAFE mementos.

The results of the survey will be analyzed by CSAFE and potentially published. However, individual participants will not be identified. We are required to report the results only in an aggregate manner that prevents associating responses with any particular laboratory or individual.

The survey is expected to take around 1 hour, although that will vary according to the answers given.

Please complete this survey by March 31, 2018

ASCLD is excited to announce the addition of new awards to be debuted at the symposium this year. There are so many wonderful initiatives ASCLD and its members are involved in that we are pleased to be able to recognize more of them.

Awards include:

- ASCLD Member of the Year – ASCLD member who has made significant contributions to the organization in the past year. (Nomination form will be distributed to membership in advance of the symposium.)
- FORESIGHT – Most innovative success story epitomizing the tenets of FORESIGHT.
- Symposium Presentations by a member – The best presentation as voted by the audience.
- Symposium Attendee with longest membership.
- Best Capstone presentation from the Leadership Academy – voted upon by Leadership Academy participants and instructors.
- FTOCoE / NIJ / ASCLD Webinar of the Year – Attendance and audience feedback will be key indicators for selection of this award.
- Briggs White - Exceptional competence and achievement in any area of public administration, leadership shown in the direction or development of programs, creativity and resourcefulness, adherence to the basic principles of enlightened public service, integrity and dedication to duty. (https://www.ascld.org/nominations/)

In addition to the existing and new awards, ASCLD will be recognizing members in other new areas. Please be sure to join us for this year’s Awards Banquet in Atlanta!
Dear Forensic Science Professionals,

The topic of “bias” and its implications for forensic practice has been hotly debated and researched in forensic and academic circles over the last decade. The 2009 National Academy of Sciences (NAS) report on the state of forensic science in the USA and the 2016 President’s Council of Advisors on Science and Technology (PCAST) report on forensic science recommend that forensic practitioners address issues relating to bias in forensic science and provide evidence to the fact finder that they have done so.

This workshop uses an engaging and innovative mixture of lectures, case examples, and practical activities to educate participants on the theoretical concepts and practical implications of bias within forensic science. Participants will receive instruction on the various types of bias, how to identify its presence, how to mitigate its influence, methods on how to sequentially unmask data, procedures used to identify task-relevant information, concepts for the appropriate management of case-specific contextual information and how to appropriately document critical decision pathways.

This workshop is primarily aimed at forensic science practitioners both scene or laboratory based, especially those involved in the early identification, collection and interpretation of evidence. It is however designed to benefit anyone who produces, uses or relies upon forensic science for decision making purposes within the justice system, including judges, district attorneys, defense lawyers, and detectives.

The workshop is $395 per person.

For registration, please visit: http://www.cedarcrest.edu/forensic/18/2.htm

---

45th Annual ASCLD Symposium

Advancing Forensic Science requires leadership, which includes taking initiative, motivating employees, and applying resources creatively to the complex problems presented by today's forensic casework and issues. Leaders lead by example and encouragement, building on success and learning from their past experiences and that of others.

Please join us in Atlanta, Georgia, May 20-24th for the 2018 ASCLD Symposium where you will learn about exciting initiatives to advance forensic science. New and experienced managers and directors will be presented with innovative tools to sharpen their leadership skills. Presentations from experts and leaders, both inside and outside the forensic science community, will cover various aspects of leadership. Our goal is to invigorate you with techniques and information to increase your leadership capacity in both life and occupation.

Volunteer Opportunity

The American Association for Laboratory Accreditation (A2LA), provider of accreditation to forensic organizations and other testing and testing related providers, is seeking forensic science practitioners to serve on a voluntary basis on the A2LA Forensic Examination Advisory Committee (FEAC) and A2LA Accreditation Council (AC). Participation is primarily through electronic communication (e.g. teleconferences, emails, online portal) and benefits of membership include: networking opportunities with other practitioners and technical experts from other fields, increased knowledge of the accreditation process, ability to provide technical input in areas of accreditation and quality assurance, and an invitation to attend the A2LA Technical Forum and Annual Meeting. Additionally, Accreditation Council (AC) members become honorary members A2LA, the association, and gain access to unique presentations and trainings such as ISO/IEC 17025:2017 and similar. For additional information, please see the [https://www.a2la.org/genweb/tac.cfm](https://www.a2la.org/genweb/tac.cfm) page to learn about A2LA’s Technical Advisory Committees or [https://www.a2la.org/AC/Join-Accreditation-Council.cfm](https://www.a2la.org/AC/Join-Accreditation-Council.cfm) for information on the A2LA Accreditation Council.”

JOB OPPORTUNITIES (Hiring now)

Due to an recent upgrade with the newsletter software, visit http://www.ascld.org/jobs2 to link and view details about job announcements listed below.

- **Forensic DNA Analyst**, DNA REFERENCE LAB, Inc., San Antonio, Expires: April 2, 2018
- **Forensic Analyst – Biology**, Houston Forensic Science Center, Houston, TX, Expires: April 6, 2018
- **DNA Supervisor-Principal Executive Manager E**, Oregon State Police, Portland, OR, Expires: February 19, 2018
- **Forensic Examiner DNA 3 01377**, ORAU, Ft. Gillem, GA, Expires: April 26, 2018
- **Forensic Examiner DNA 1 01376**, ORAU, Ft. Gillem, GA, Expires: April 26, 2018
- **Forensic Examiner Latent Print 1 01375**, ORAU, Ft. Gillem, GA, Expires: April 26, 2018
- **Forensic Examiner Latent Print 3 01374**, ORAU, Ft. Gillem, GA, Expires: April 26, 2018
The Need for Safety Officers and a Health and Safety Committee

The elements of a Chemical Hygiene Plan (CHP) have been the subject over the last few weeks. Previous topics have been 1) the need for SOPs (Standard Operating Procedures), 2) Criteria for Implementing Control Measures, 3) requirement to ensure that fume hoods and other protective equipment are functioning properly and identify the specific measures the employer will take to ensure proper and adequate performance of such equipment, and 4) Required Information to be provided to lab personnel working with hazardous substances. This week’s topics are 5) the circumstances under which a particular laboratory operation, procedure or activity requires prior approval from the employer or the employer’s designee before being implemented, and 6) Designation of personnel responsible for implementing the CHP, including the assignment of a Chemical Hygiene Officer and, if appropriate, establishment of a Chemical Hygiene Committee.

5) The circumstances under which a particular laboratory operation, procedure or activity requires prior approval from the employer or the employer’s designee before being implemented. Prior to any new work being conducted in a lab that uses a hazardous chemical, prior approval must be acknowledged. Prior approval would normally come from the Chemical Hygiene Officer (CHO) or Safety Officer in your lab. Many procedures use chemicals that require special considerations. Additionally, some labs may not have the proper storage or work area for its use. Also, the chemical must be added to the chemical inventory, all personnel who will work with or come in contact to the chemical must read the Safety Data Sheet (SDS). Having a plan where an employee has read the SDS and understands the hazards by signing a review sheet or some other acknowledgement is a good way to improve compliance. Additionally, ordering and purchasing hazardous chemicals should go through one person or a team so that proper storage locations, policies, and procedures can be appropriate for chemicals ordered.

6) Designation of personnel responsible for implementing the CHP, including the assignment of a Chemical Hygiene Officer (CHO) and, if appropriate, establishment of a Chemical Hygiene Committee. Designating a person, such as a CHO or Safety Officer for day-to-day administration of chemical issues is paramount and crucial for accreditation. A CHO will provide reports at the department Safety Committee meetings on chemical hygiene activities performed. Additionally, a CHO will work with others to develop, review and approve Standard Operating Procedures which detail all aspects of proposed laboratory activities that involve hazardous materials. A Chemical Hygiene Committee, commonly known as a Safety Committee (or Health and Safety) in forensic labs is also a requirement for accreditation. Health and Safety committee members should establish a committee structure and process and develops an action plan for the year that identifies a few priority health and safety issues to work on. The concerns would be addressed at safety committee meetings and the executive management meeting(s).

Episode 9 Podcast!!
Just Blood Spatter

In episode nine of Just Science, funded by the National Institute of Justice’s Forensic Technology Center of Excellence [Award 2016-MU-BX-K110], we spoke with Dr. Marc Smith, from the Georgia Institute of Technology. Dr. Smith’s NIJ funded research in blood spatter has connected computational fluid dynamics with empirical studies to improve the understanding of blood spatter onto solid, slanted surfaces. His work looks at many variables, including droplet size, speed, surface roughness and wettability. Listen and Subscribe HERE.

REVEALED: Scientists find man with ‘perfect smile’ in 3,500 year-old BRONZE AGE SKELETON
A “CATCH for the ladies” man, described as having the “perfect smile”, has been found by scientists examining the remains of a young Bronze Age male with better teeth than many modern-day Britons, it has been revealed.

Top Detective Blows Whistle On Drug War, Prison System
Before he was Ron Paul and Rand Paul’s head of security, John Baeza was a cop’s cop. Coming from a family tradition of public servants, Baeza started his career as a corrections officer in New York’s infamous Sing Sing prison. He later became an undercover narcotics detective in Manhattan during the height of the 80s crack craze. It was there that Baeza had a Road to Damascus experience: after almost losing his life in an undercover drug buy, he realized the futility of the drug war and all victimless crime laws.

Investigators begin piecing together ‘puzzle’ in Toronto serial killer case
Earlier this week, police discovered dismembered remains of at least three people in the bottoms of large planters after searching a property at Mallory Crescent in midtown Toronto. They believe those cases are connected to the presumed deaths of two men who went missing from downtown Toronto.

Investigators focusing on backyard of home linked to alleged serial killer
Investigators have set up a large green tent in the backyard of a home where murder suspect Bruce McArthur stored his landscaping equipment where they hope to thaw the ground enough to begin excavating the property.

Lake County commissioners put crime lab levy on May ballot
The existing levy annually costs taxpayers $7.51 per $100,000 home valuation. If approved, the new levy would cost voters an additional $14 annually per $100,000 home valuation, according to the Lake County Auditor’s Office.

Crime lab didn’t find usable DNA on guns victims in May 2016 shooting handled
A state DNA analyst said no DNA from either of the victims in a May 2016 double slaying was found on guns they allegedly handled, but admitted under cross-examination that it is rare to find so-called touch DNA on firearms.

Community invited to tour campus crime lab
Faculty, staff, and students in the criminal justice program will show the equipment and demonstrate what they teach and learn in the lab, in the East Building, Room 103. It will be open from 5 to 6:30 p.m.

Jurors hear from crime lab technicians
On Friday, jurors in the George Walker murder trial heard from witnesses from the Kentucky State Police crime lab about evidence they analyzed in connection with the murder of Alison Walker.

Houston forensic analyst fired for shredding homicide documents
The agency said the violation “only pertains to one case,” but that it will audit all of the former employee’s work. The agency also said it will redo the forensic analysis in the homicide case “to ensure law enforcement and prosecutors have accurate, reliable information.”

Orange County prosecutors cast a bigger net to review DNA cases than San Diego county did
When the San Diego District Attorney’s Office last week began notifying lawyers for 254 convicted defendants that rule changes for DNA evidence could affect their case, it wasn’t the first time that a prosecutor’s office had re-examined closed cases that relied on such forensic evidence.

Jurors in trial of Joe McKnight’s accused murderer head to crime lab to see car at center of case
The 12 jurors and four alternates spent about 10 minutes looking at and in Gasser’s blue Infiniti as Judge Ellen Kovach, prosecutors Seth Shute and Shannon Swaim and defense attorneys Gerard Archer, Matt Goetz watched.

Millsboro mom calls cops over son's meth lab
Elijah Cantrell, the 39-year-old son, fled the home before police arrived and now is wanted for operating a secret laboratory and possessing drug paraphernalia.

Thousands of criminal cases reviewed after DNA rules changed
The extensive review, ordered by District Attorney Tony Rackauckas in 2011, a year after a national science group changed the way DNA mixtures are interpreted, resulted in reduced charges in just two serious crimes, prosecutors said. Dozens more were found to include evidence in which the defense might have benefited under the new DNA standards.

HumanDocs series returns with “I Am Evidence”
The documentary showcased testimonies of women in the three cities who were victimized first by rape and then by the system’s neglect. They waited as long as 15 years to see progress on their cases and eventually grew to expect that nothing would happen.

Culture: Made Museum
Everyone calls it the Mob Museum, but the other half of its mission — technically, it’s the National Museum of Organized Crime and Law Enforcement — will see its share of the spotlight grow come February 14, when the museum debuts a $9.2 million renovation.

City Club of Chicago: Crime in Chicago — Beyond the Headlines
Between 2015 and 2016, homicide rates in Chicago increased by nearly 60%, undoing much of the progress the city made in reducing crime over the past 25 years since the peak of the crack cocaine epidemic in the early 1990s. What happened to crime rates in 2017? Has the problem gotten better or worse over the past year? What solutions have been tried, and how effective have they been?

Test on recovered rifle could show if killer is still out there after 3 dead in Byromville
The GBI is expediting tests on a rifle recovered Friday from the scene of three shooting deaths in Dooly County.

Introduction

This course is designed primarily for practitioners who routinely examine blood stained clothing and other textiles and are required to assess, interpret, and report on bloodstain patterns as part of those examinations. The course is delivered through a combination of “face to face” instruction and self-directed learning. A minimum 80 hours of structured learning activities is required, inclusive of a 40 hour “face to face” residential component. The course will review the underpinning principles of BPA, and apply these principles to the

Bode Cellmark Forensics provides advanced forensic solutions offering crime labs ways to reduce their workloads and budgets.

Bode’s newest offerings include: Sexual Assault Kit Backlog Reduction Program streamlines processes to eliminate backlogs of untested sexual assault kits.

Bode Buccal 2™ is uniquely designed to improve DNA databanking collecting and automate processing. The Bode Buccal 2 is a DIRECT COLLECTION SYSTEM that requires minimal training. There is NO Transfer Step Required.

Independent Validation Services are customized to meet your laboratory’s needs. Validation services provide completely unbiased analysis on your equipment, chemistries, or process.

Establishment of an Office of Forensic Sciences and a Forensic Science Board Within the Department of Justice

Revision 2/14/17

Formed in 2000, CFSO is an association of six forensic science professional organizations: American Academy of Forensic Sciences; American Society of Crime Lab Directors; International Association for Identification; International Association of Forensic Nurses; National Association of Medical Examiners; and Society of Forensic Toxicologists - American Board of Forensic Toxicology. These professional organizations together represent more than 21,000 forensic science professionals across the United States.

Read the CFSO Newsletter here.

Grant Assistance for DNA
analysis and interpretation of bloodstains on clothing and other textiles.

When examining clothing, the practitioner must be mindful of influences such as the fibre type, texture, treatments, all of which may affect the final appearance of bloodstains. The primary focus of the course is to develop those skills required for the examination of bloodstain patterns found on clothing items, including the use of microscopy to discriminate between spatter and transfer bloodstains.

The new year is upon us. Invest in yourself in 2018 by attending one of the upcoming programs hosted by the WVU Center for Executive Education.

Forensic Management Academy
September 9 - 14, 2018
Allegheny County Medical Examiner's Office
Pittsburgh, PA

Lean Six Sigma Certification for Forensic Science Professionals
March 20 - September 11, 2018
Via online webinar with one face-to-face class held on September 11, 2018 from 9 a.m. – 5 p.m. in Pittsburgh, PA at the Hyatt Regency Pittsburgh International Airport.

For more information on the Forensic Management Academy and Lean Six Sigma programs, please visit business.wvu.edu/execed or email Martina Bison-Huckaby at Martina.Bison-Huckaby@mail.wvu.edu.

Since 1995, JusticeTrax has produced a suite of products geared specifically toward the law enforcement and forensic community. Over the years, our applications have gained increasing acceptance among city, county, state and federal law enforcement agencies. Our applications are designed by forensic scientists and are the most comprehensive case management tools available.

With installations ranging from small, single-site laboratories of five users, to extremely large multi-site installations with 500+ users, we are honored to serve some of the most sophisticated crime laboratories in North America, Australia, the Caribbean, and the Middle East. Of these 175+ laboratories, greater than 95% are accredited to the ISO/IEC 17025 International Standard.

JusticeTrax is an ISO 9001:2015 certified company.

The JusticeFacts newsletters are found at http://JusticeTrax.com/sales/newsletters.
National Institute of Justice’s latest Graduate Research Fellowships in Science, Technology, Engineering, and Mathematics. NIJ has made 20 new awards in 2017 for STEM fellows, totaling $960,861 for graduate students working towards advancing NIJ’s mission. The GRF-STEM program funds dissertation research across a wide range of topics to criminal justice, including the forensic sciences.

See a full list of awards and descriptions, awardees, and dollar amounts. Sign up to get email notices when NIJ releases GRF and other funding solicitations.

NIJ-FBI Fingerprint Partnership Identifies 200 Missing Persons
In March of this year, a new collaboration began between the National Institute of Justice and the FBI Laboratory. Fingerprints from unidentified missing persons are sent to the FBI where a new technology, known as Next Generation Identification, along with enhanced processing protocols, is improving the odds of identification. Identifications are increasing even with poor quality prints or with those that have been searched in the past.

The National Institute of Justice recently released a report on National Best Practices for Sexual Assault Kits: A Multidisciplinary Approach in response to the Sexual Assault Forensic Evidence Reporting (SAFER) Act of 2013, which focuses on the accurate, timely, and effective collection and processing of DNA evidence in sexual assault investigations. A practitioner working group developed 35 recommendations that provide a roadmap for collecting, transferring, preserving, storing and analyzing sexual assault kits. The recommendations apply to medical professionals, members of law enforcement, victim advocates, prosecutors and laboratories. A coordinated, collaborative and multidisciplinary approach to sexual assault investigations helps reassure and support victims of sexual violence, encourages victim engagement and increases the potential for just legal resolutions.

The Fingerprint Sourcebook is Now Available in Spanish
NIJ has released a Spanish-language version of The Fingerprint Sourcebook, which aims to be the definitive resource on the science of fingerprint identification. The Sourcebook was prepared by the International Association for Identification and topics covered include the anatomy and physiology of friction ridge skin; techniques for recording exemplars from both living and deceased subjects; AFIS; latent print development, preservation and documentation; equipment and laboratory quality assurance; perceptual, cognitive and psychological factors in expert identifications; and legal issues.

Forensic Identification Using Individual Chemical Signatures
NIJ-funded researchers developed an approach to translate chemical signatures recovered from personal objects such as phones into a lifestyle sketch of the owner, using mass spectrometry and informatics approaches.

Quantifying Error Rates for the Measurement of Human Skeletal Remains
NIJ-funded researchers revised forensic anthropology procedures to include an “error metric” for the measurement of human skeletal remains. This article summarizes findings from that study.

Designing Methods to Identify Evolving Designer Drugs
This article describes an NIJ-supported research project focused on issues of resolution and discriminatory capabilities needed to increase the reliability and selectivity of forensic evidence and analytical data for new bath salt-type drugs of abuse.

Standardized Process Developed for Identifying Dyes in Fibers
This article summarizes a method with the twofold purpose of producing a novel, reliable, and useful microfluidic system for fabric dye extraction and increasing the knowledge needed to guide criminal justice policy and
practice related to the forensic analysis of dyed fabric.

The Most Important Features for an Effective Sexual Assault Response Team
Sexual Assault Response Teams (SART) hold the promise of improving victim experiences, increasing prosecution rates, and reducing the prevalence of sexual assault. To understand how an effective SART works, NIJ-funded researchers studied the structure and operations of SARTs across the United States.

Identifying Ignitable Liquids in the Aftermath of A Fire
In a wide-ranging analysis of the effects of weathering and biological degradation on ignitable liquids, NIJ-supported researchers at the University of Central Florida's National Center for Forensic Science studied and classified 50 liquids in the Ignitable Liquids Reference Collection database.

Scale Modeling in Fire Reconstruction
After reviewing scaling theory used in fire research, this project developed scaling rules for design fires and enclosure material boundaries, followed by the full-scale testing of a gas burner, heptane pool fire, pine wood crib, and polyurethane foam, and the scaling theory was applied to the full-scale scenario and a 1/8 scale compartment.

Evaluation of the Use of a Non-Contact 3D Scanner for Collecting Postmortem Fingerprints
Historically, the recording of postmortem fingerprint impressions from decedents is a manual and labor-intensive process. 3D scanners are potentially an important tool to help forensic scientists address the challenges of postmortem fingerprint recovery due to the contactless scanning capabilities, as well as the ability to scan complex surfaces and capture scale. This NIJ-supported study evaluated the potential for using a contactless, 3D fingerprint scanner to capture examination-quality postmortem fingerprints and facilitate rapid identification of the deceased.

Evidential Value of Particle Combination Profiles on Common Items of Evidence
This project used the analytical tools and statistical methods developed in previous research funded by NIJ to measure the evidential value of very small particle (VSP) profiles found on four common types of physical evidence: handguns, cell phones, drug packaging, and ski masks.

Method Development and Validation of Toolmark Imaging, Virtual Casing Comparison, and In-Lab Verification using a GelSight-Based Three Dimensional Imaging and Analysis
Stemming from a previous project that developed a 3D surface topography imaging and analysis system for casings based on the GelSight scanning technology and custom feature-based image comparison, this NIJ-supported project aimed 1) to develop the ability to scan and compare firing pin impressions; 2) to examine the use of the imaging and analysis technology in a live lab experiment; and 3) to investigate Virtual Microscopy, the use of measured 3D surface topographics as a substitute for physical casings.

The goal of the Laboratories and Educators Alliance Program (LEAP) is to facilitate collaborative research between academia and forensic science laboratories. This joint effort between the American Society of Crime Lab Directors (ASCLD) and the Council of Forensic Science Educators (COFSE) identifies forensic science needs and provides a platform for laboratories, researchers, and students to seek projects aligning with their mutual research capabilities.

**Laboratories**
- Enhances the research climate within the laboratory, leading to meaningful contributions to forensic science practices.
- Provides educational opportunities, such as student presentations and guest lectures.
- Supports the laboratory through hosting student interns to assist in validation and evaluation projects.
- Facilitates the connection between the laboratory and university programs, potentially assisting with future hiring and research needs.

**Academia**
- Provides meaningful research by providing links of training, future needs, and research interests that can lead to future collaborations.
- Enhances the knowledge base of university faculty and students through the transfer of knowledge.
- Enhances academic achievements through the valuable internship experiences provided to students.
- Establishes the connection and collaborations between university and forensic science laboratories as required for accreditation.
