PRESIDENT’S MESSAGE

Colleagues,

Continual improvement is not only something we ask our laboratories to focus on, it’s something your ASCLD Board of Directors also believes is important for this organization. As we settle into 2017, the ASCLD Board is looking to measure our successes from last year and determine areas for improvement for this one.

The ASCLD Board of Directors will be meeting March 2-3 in Phoenix, Arizona for our annual strategic planning session and we would sincerely value the membership’s input and feedback. The meeting in March is a way to make the final preparations for the 2017 Symposium in April and is a time to refine our 2016-2017 strategic plan that was developed under the leadership of immediate Past-President Jody Wolf last year.

To gain feedback from the membership, we have created a brief, online survey. I know that sometimes we can get “over-surveyed” and we are all very busy. If everyone had a few minutes to complete this one, however, we would be very appreciative. We hope to have survey responses returned by the end of February so that we can sit down and evaluate the membership’s comments in March.

The survey can be found at the following link: http://www.questionpro.com/t/AGGeDZYRnV

Thank you in advance to all those members who can provide us helpful feedback as we routinely seek to be responsive to your thoughts and advance this great organization.

I hope you have a great week.

Kindest regards,
Jeremy Triplett

Public Comment Period for the ASB Standard 017, Standard Practices for Measurement Traceability in Forensic Toxicology, is open until February 24, 2017.

From the Academy Standards Board:

“This Standard Practices for Measurement Traceability in Forensic Toxicology was developed to provide guidance on minimum requirements for establishing measurement traceability in Forensic Toxicology laboratories. The fundamental reason for establishing traceability of a measurement is to ensure confidence and reliability in forensic toxicological test results.

Please visit the Notification of Standard Development and Coordination area of the AAFS Standards Board website to view the draft document and to provide comments.

Please send any questions to asb@aafs.org.

HOTEL RESERVATIONS AND SYMPOSIUM REGISTRATION

44th Annual ASCLD Symposium, April 30 – May 4, 2017, Dallas, Texas

The theme for the 2017 symposium is “Continuous Improvement – Leading through Continuous Learning.” ASCLD is interested in presentations that focus on innovative techniques...
to permit managers to mentor and inspire their employees as they strive to continuously improve their organizations. The key goal of 2017 ASCLD presentations is to provide crime lab leadership with actionable tools and transportable information that can be directly applied to improve their operation.

44th Annual ASCLD Symposium hotel room block for the 2017 Symposium is now available!

https://www.starwoodmeeting.com/events/start.action...
http://www.ascldsymposium.com/hoteltravel

Links can also be found on the ASCLD FACEBOOK page at https://www.facebook.com/profile.php?id=100010477606575

**Sponsorship and Exhibits**

The ASCLD Symposium is an opportunity to meet the industry leading Crime Lab Directors from the United States and throughout the globe. We invite you to take the opportunity to participate in the Symposium through networking opportunities in exhibiting.

http://www.ascldsymposium.com/sponsors-exhibitors

**Preview of Symposium Workshops and Key Note Speakers...coming soon**

**Golf Tournament, May 1st, 2017**

Stevens Park Golf Course –
1005 N Montclair Ave, Dallas, TX 75208

Join us for a round of golf with your colleagues and the symposium sponsors for a Best Ball tournament and a chance to win a prize! The shotgun start will be at 12:30pm, with a buffet lunch provided beforehand.

ASCLD will be assigning teams of 4 ahead of time to allow for networking and new opportunities to be presented for all participants.

You can sign up for the golf tournament through our registration system [here]. You will need to complete a full registration to be signed up for the tournament. The registration cost of $80/person includes 18 holes of golf, cart fees and lunch. Golf clubs can be rented for an additional charge at the course. Transportation to and from the course is not included.

See you there!

As of today, bite mark evidence has led to

Rape cases: Amended bill makes DNA report compulsory.

Meetings of the National Commission on Forensic Science (NCFS) are held quarterly in Washington, DC. NCFS meetings are open to the public. Public registration for NCFS meetings is available approximately one month in advance of a meeting and can be found under the respective meeting link. NCFS meetings are also webcast.

The thirteenth meeting of the National Commission on Forensic Science will be held April 10-11, 2017 in Washington, DC.

If you would like to receive email updates as new information or new materials are added, please subscribe.

NIJ Forensic Science R&D Reports for ASCLD Crime Lab Minute Vol 9

These research reports have been submitted by the National Institute of Justice (NIJ) especially for their relevance to crime laboratory activities. ASCLD has not reviewed nor does it necessarily endorse the findings of this research.

Funding Opportunity for Research and Development in Forensic Science for Criminal Justice Purposes NIJ has released a solicitation seeking proposals for basic and applied research and development projects. The goal of this solicitation is to direct the findings of basic scientific research, research and development in broader scientific fields applicable to forensic science, and ongoing forensic science research toward the development of accurate, cost-effective, and rapid methods for the identification, analysis, and interpretation of physical evidence for criminal justice purposes. Deadline: February 28, 2017 Learn more about this solicitation in a webinar recording available soon.

Funding Opportunity: Paul Coverdell Forensic Science Improvement Grants Program – Competitive NIJ is seeking proposals for the Paul Coverdell Forensic Science Improvement Grants Program (the Coverdell program), which awards grants to states and units of local government to help improve the quality and timeliness of forensic science and medical examiner/ coroner’s office services. Among other things, funds may be used to eliminate a backlog in the analysis of forensic evidence and to train and employ forensic laboratory personnel, as needed, to eliminate such a backlog. This funding opportunity is only for competitive funds. Deadline: March 10, 2017 Learn more about this and other funding opportunities for crime labs in a webinar recording available soon.

Funding Opportunity: Paul Coverdell Forensic Science Improvement Grants Program – Formula NIJ is seeking proposals for the Paul Coverdell Forensic Science Improvement Grants Program, which awards grants to states and units of local government to help improve the quality and timeliness of forensic science and medical examiner/ coroner’s office services. Among other things, funds may be used to eliminate a backlog in the analysis of forensic evidence and to train and employ forensic laboratory personnel, as needed, to eliminate such a backlog. This funding opportunity is only for the formula (“base”) funds. Deadline: March 10, 2017 Learn more about this and other funding opportunities for crime labs in a webinar recording available soon.

Funding Opportunity: Research and Evaluation for the Testing and Interpretation of Physical Evidence in Publicly Funded Forensic Laboratories NIJ is seeking proposals for research and evaluation projects that may: 1.) Identify and inform the forensic community of best practices through the evaluation laboratory protocols; and 2.) Have a direct and immediate impact on laboratory efficiency and assist in making laboratory decisions. The intent of this program is to identify the most efficient, accurate, reliable, and cost-effective methods for the identification, analysis, and interpretation of physical evidence for criminal justice purposes. Deadline: February 27, 2017 Learn more about this and other funding opportunities for crime labs in a webinar recording available soon.

Funding Opportunity: Forensic DNA

Marshall University Forensic Science is offering the DNA Technical Assistance Program (DNA TAP) again this year. Attached is the DNA TAP Information flyer and the associated DNA TAP Request Form should you have validation or evaluation needs. Beginning this week, a limited number of DNA TAP students are in training at the MU Forensic Science Center from now until May for their summer 2017 DNA TAP assignments. No assignments have been made at this time so please apply early this fall to have the best chance to be assigned a DNA TAP student.

Please feel free to call (304-634-5263) or email (staton1@marshall.edu) should you have questions or wish to apply but need more information. If you are new to this program, I would be happy to set up a conference call with your group to discuss this further.

Also, please feel free to forward this email and its attachments to a colleague.

Thank you,
Pam

Bode Cellmark Forensics provides advanced forensic solutions offering crime labs ways to reduce their workloads and budgets.

Bode’s newest offerings include:

**Sexual Assault Kit Backlog Reduction Program**
streamlines processes to eliminate backlogs of untested sexual assault kits.

**Bode Buccal 2** is uniquely designed to improve DNA databanking collecting and automated processing. The Bode Buccal 2 is a DIRECT COLLECTION SYSTEM that requires minimal training. There is NO Transfer Step Required.

**Independent Validation Services** are customized to meet your laboratory’s needs. Validation services provide completely unbiased analysis on your equipment, chemistries, or process.
Laboratory Efficiency Improvement and Capacity Enhancement Program

Demands for forensic DNA analysis increased every year from 2009 to 2013 with a 28 percent increase in cases submitted to forensic DNA laboratories during that time period. Often, a single case submission includes requests for forensic analyses in DNA and non-DNA disciplines. Enhancing capacity and improving efficiency in the processing and testing of non-DNA evidence from cases that also involve a request for DNA analysis will ultimately reduce the backlog of DNA evidence. NIJ’s DNA Laboratory Efficiency Improvement and Capacity Enhancement (EI&CE) program is intended to help address that gap. Deadline: March 13, 2017 Learn more about this and other funding opportunities for crime labs in a webinar recording available soon.

Funding Opportunity: DNA Capacity Enhancement and Backlog Reduction (CEBR) Program

The goal of NIJ’s FY 2017 DNA Capacity Enhancement and Backlog Reduction (CEBR) program is to assist eligible states and units of local government to process, record, screen, and analyze forensic DNA and/or DNA database samples and to increase the capacity of public forensic DNA and DNA database laboratories. Under this program, in general, eligible applicants are given the opportunity to determine what portion of their anticipated funding should be used for capacity building purposes and what portion should be used for analysis of forensic DNA and/or DNA database samples. Deadline: March 13, 2017 Learn more about this and other funding opportunities for crime labs in a webinar recording available soon.

Funding Opportunity: Strengthening the Medical Examiner-Coroner System Program

Death investigations performed by medical examiners or coroner (ME/C) offices are vital to criminal justice. Of the 2.6 million deaths annually, ME/C offices investigate nearly 500,000 cases in approximately 2,400 jurisdictions, but many communities lack adequate personnel, infrastructure, and resources to address medicolegal death investigation (MDI) needs. NIJ’s Strengthening the Medical Examiner-Coroner System Program is a competitive program designed to enhance MDI services and increase the supply of forensic pathologists nationwide by supporting forensic pathology fellowships as well as ME/C office accreditation. Deadline: March 20, 2017

Adapting Newborn Blood Testing Procedures to Forensic Toxicology

A recent article in a U.S. law describes a procedure known as dried blood spot (DBS) testing that can be used in forensic toxicology examinations and would benefit both forensic laboratories and the judicial system. The researchers examined dried blood spots for evidence of 28 drugs and metabolites. The specific goal of their work was to determine if DBS analysis could produce results comparable to traditional drug analysis and, when combined with mass spectrometry, be sensitive enough for quantification of "drugs of abuse" typically encountered in forensic labs.

Degraded Ignitable Liquids Database: An Applied Study

Identification of ignitable liquid residues in fire debris is complicated by weathering that causes the loss of ignitable liquid components and the presence of microbes that alter the residue’s composition. In this NIJ-supported project, researchers from the University of Central Florida analyzed the effects of weathering and biological degradation on 50 different ignitable liquids taken from each of the ATSM E1618 designated classes and selected from the Ignitable Liquids Reference Collection (ILRC). The results of this project led to an upgrade of the ILRC Database and provided fire debris analysts with hundreds of examples of weathered and biologically degraded ignitable liquid samples.

Statistical Methods for Combining Multivariate and Categorical Data in Postmortem Interval Estimation

Inferring the time since death is routine in death investigations, but basing such post-mortem interval (PMI) numbers on the developmental stages of maggots and other insects is less than straightforward. The biological clock provide by insect appearance and growth in a dead body comes with a great deal of uncertainty because the sizes and succession combinations of insects differ even when observed under identical conditions. Researchers at the Louisiana State University Health Sciences Center, working with NIJ support, developed a statistical method using inverse prediction to assess the time since death with a reasonable confidence level, most
Citrate Content of Bone: A potential Measure of Post Mortem Interval

A constant concern for forensic practitioners is the determination of the post-mortem interval (PMI) in questioned death cases. A number of methods have been tried to better determine PMI, but all have proven problematic. NIJ-supported researchers at the SUNY Brockport Research Foundation evaluated the citrate method for determining PMI based on a 2010 study that indicated citrate content in bone could be potentially useful in estimating PMI. The researchers, with the College at Brockport, SUNY, analyzed more than 30 human bone samples and determined that the "theoretical correlation between citrate content of bone and PMI is much weaker than reported [in the earlier study]. They also tested porcine bone samples, but in the end concluded that, "citrate is not a reliable and validated method for determining PMI in bone."

Evaluation of Osteometric Measurements in Forensic Anthropology

Emphasizing the accuracy of collecting data and improving error rates for forensic anthropologists working with skeletons, NIJ-supported researchers from Lincoln Memorial University had four "observers" with different experience levels measure elements of 50 skeletons. The error data resulting from the measurements allows researchers to determine the efficacy of commonly used skeletal measurements and to evaluate alternatives for problem measurements.

Graphical User Interface for a Multi-Factorial Age-At-Death Estimation Method Using Fuzzy Integrals

Most forensic anthropologists develop their own guidelines, typically based on past experience, for combining multiple indicators to determine an individual's age-at-death based on a skeleton. Researchers in this NIJ-supported project note that such results are not standardized or reproducible. To address this problem the researchers, from Texas State University, developed a graphical user interface (GUI) with algorithms based on "fuzzy integrals" that provide forensic scientists with a multifactorial age-at-death estimation, confidence in the estimation, informative graphs, and a standardized, reproducible method for age-at-death estimations. The researchers intend to make the interface available free online.

Microspectrophotometry of Fibers: Advances in Analysis and Interpretation

Microspectrophotometry is a standard forensic laboratory technique for the comparison of fibers, however, there are concerns about its discriminating power and significance in a field that is moving toward statistical interpretation of data. In this NIJ-supported project, researchers with the forensic laboratory Microtrace conducted an extensive review of microspectrophotometry to present investigators with a context for relating spectral differences to colorant concentrations in fibers and illustrate cases in which similar, but different, fiber populations could not be discriminated.

Massively Parallel Sequencing: Application to Forensics

Massively parallel sequencing (MPS), also called next-generation sequencing, is an exciting technology that holds promise for enhancing the capabilities of forensic DNA laboratories. However, several challenges confront the implementation of an MPS system in a crime laboratory. This report, by NIJ’s Forensic Technology Center of Excellence (FTCoE), provides best practices for DNA scientists with a comprehensive resource on the fundamentals of current platforms and chemistries and summarizes a series of MPS related webinars hosted by the FTCoE in conjunction with the University of North Texas Health Science Center’s Institute of Applied Genetics.

Examining the Effects of Environmental Degradation on the Optical Properties of Manufactured Fibers of Natural Origin

Synthetic fibers derived from naturally derived biological polymers are used in textiles and clothing. With the production of these manufactured fibers of natural origin (MFNOs) increasing in recent years, they are likely to become more common in regular case work in the forensic science laboratory. However, little is known about the changes occurring in their optical and physical properties as a result of exposure to moisture, sunlight, and various temperatures. This NIJ-supported study investigated

Project FORESIGHT

FORESIGHT is a business-guided self-evaluation of forensic science laboratories across the globe. The participating laboratories represent local, regional, state/provincial, and national agencies. Faculty from the WVU College of Business and Economics provide assistance, guidance, and analysis. We link financial information to work tasks and functions. Laboratory managers can use these functions to assess resource allocations, efficiencies, and value of services—the mission is to measure, preserve what works, and change what does not. To participate, simply complete the LabRAT workbook and submit to Paul Speaker at email paul.speaker@mail.wvu.edu. Please send any questions to the same email address. For additional information, please visit the program web site http://be.wvu.edu/forensic/foresight.htm

We are targeting a submission date of December 15, 2016.

Regards,
Paul J Speaker
effects of such degradation on three types of MFNOs. The results indicate that forensic fiber comparison can be conducted on such fibers exposed to different environments, while highlighting possible explanations for some observed morphological differences.

**Transition Metal Cluster Compounds for the Fluorescent Identification and Trace Detection of Substances of Abuse**

This NU-funded research project focused on fluorescent indicators for substances of abuse with enhanced specificities. These new fluorescent indicators are based on d10 metal complexes and allow greater detection sensitivity and flexibility. The indicators are shelf stable and low cost, and the complexes formed can be stored for long periods without loss of fluorescence. Combining new sources, fluorescent indicators, and digitizing systems will produce systems capable of positively identifying compounds rapidly both in the field and in the lab. Ultimately, the procedure will be implemented in a hand-held system that will allow assessment of multiple indicators in the field.

**Fighting Bias - Self-Paced Online Professional Training**

This self-paced online professional training program focuses on Minimizing bias in Forensic Decision Making. This program covers brain and cognitive issues relating to bias and cognitive processing. It then connects the cognitive science issues to practical and specific issues in forensic decision making. In addition to knowledge about the cognitive factors in forensic decision making, the program also provides practical solutions to address weaknesses as well as best practices to enhance forensic practices.

This program is directly relevant to the document recently adopted by the National Commission on Forensic Science (NCFS). The practical implementation of this document ("Ensuring That Forensic Analysis Is Based Upon Task-Relevant Information") is presented and discussed, as are the recommendations of the National Academy of Sciences report on forensic science.

**Minimizing Bias in Forensic Decision Making**

**Learning Objectives:**
- Describe background information regarding the human mind and cognitive system
- Describe how information and knowledge is acquired, processed, represented, encoded, stored, utilized, retrieved, compared, and evaluated
- Describe how decisions are made
- Demonstrate the connection between information and a variety of forensic decision making processes that forensic examiners typically use
- Describe how cognitive factors can be utilized to make forensic experts’ work more efficient
- Describe the pitfalls and errors that can occur in forensic decision making

Loyola University Program Survey

Loyola University Chicago's Forensic Science Program is conducting a short survey (7 questions) evaluating the expansion of the Program. Your insights and thoughts will assist the University and the Program in meeting the needs of the forensic science community. The survey can be completed on a computer, tablet, or smartphone.

Link to the survey is: https://surveys.luc.edu/opinium6/s?e=66565

Greetings!

The International Forensic Research Institute at Florida International University is now accepting applications for the Fall 2017 Professional Science Master in Forensic Science (PSMFS) cohort.

An online information session is scheduled for Monday January 23rd at 7PM EST using Adobe Connect: https://connect.fiu.edu/psmfs012317/.

The PSMFS degree is a Master’s degree focusing on advanced forensic science and leadership/management courses taught by FIU’s premiere forensic faculty and business school. The requirements for admittance are a BS in a physical science such as chemistry or biology, an upper level GPA of 3.0 or higher, and an informal interview. The GRE is also required and is used to rank applicants.

The PSMFS degree prepares graduates to move into a management/leadership position within forensic science. The PSMFS Program is a cohort starting in Fall 2017 and graduating Fall 2018 for under $22,000 (estimation based on domestic students).

An internship is required and can be completed at the current home office or outside and can focus on pressing research needs or a lean six sigma project. The course requires a summer workshop in Miami Florida while the rest of the classes are taught online using Adobe Connect and Blackboard.

If you have any questions please feel free to email me at jperr@fiu.edu.

Sincerely,

Dr. Perr
