President’s Message----

Colleagues,

I want to make you aware of two great workshop opportunities that President-Elect Wickenheiser has coordinated with NIJ to offer at the 2017 ASCLD Symposium this year.

One workshop seeks to bring together researchers and practicing forensic scientists for critical collaborations on research. The second is tailored specifically to grant managers at crime laboratories to discuss grant requirements, reporting, and recommendations on improving competitive grant applications.

Please consider attending or sending your staff to these workshops. Additionally, if you have a close partnership with local university researchers, it could be a great opportunity for them to attend a workshop at the ASCLD symposium that focuses on collaboration with forensic laboratories. More information, including registration links are included below.

Have a great week!

Kindest regards,

Jeremy Triplett

Bridging the Gap Between Researchers and Practicing Forensic Scientists: The Need for Collaboration (The *Forensic Science Research Incubator*)

On Sunday, April 30, NIJ is conducting an 8 hour workshop at the ASCLD Annual Symposium to bring together University Researchers and Forensic Laboratory Leaders to facilitate research. Grant funding opportunities will also be presented. This workshop is an excellent opportunity to meet face to face to share ideas and forge partnerships. This meeting will also provide an opportunity to learn about the ASCLD Forensic Research Initiative. Please check out the specifics at http://www.ascldsymposium.com/events-1/i546th2e508/Bridging-the-Gap-Between-Researchers-and-Practicing-Forensic-Scientists-The-Need-for-Collaboration. General information about the annual symposium and registration can be found at http://www.ascldsymposium.com/.

NIJ Programs for Forensic Laboratories

On Monday, May 1, NIJ is conducting a 4 hour workshop at the ASCLD Annual Symposium specifically tailored to Grant Managers. This workshop will cover grant requirements and reporting, formula and competitive grants and include recommendations to write a successful competitive grant application. Specifics for this workshop can be found at http://www.ascldsymposium.com/events-2/i54cm0k133/NIJ-Programs-for-Forensic-Laboratories. For additional information and registration for the ASCLD Symposium, please go to http://www.ascldsymposium.com/.
Hotel Reservations and Symposium Information

44th Annual ASCLD Symposium, April 30 – May 4, 2017, Dallas, Texas

The theme for the 2017 symposium is “Continuous Improvement – Leading through Continuous Learning.” ASCLD is interested in presentations that focus on innovative techniques to permit managers to mentor and inspire their employees as they strive to continuously improve their organizations. The key goal of 2017 ASCLD presentations is to provide crime lab leadership with actionable tools and transportable information that can be directly applied to improve their operation.

44th Annual ASCLD Symposium hotel room block for the 2017 Symposium is now available!
http://www.asclds Symposium.com/

Golf Tournament, May 1st, 2017

Stevens Park Golf Course –
1005 N Montclair Ave, Dallas, TX 75208

Join us for a round of golf with your colleagues and the symposium sponsors for a Best Ball tournament and a chance to win a prize! The shotgun start will be at 12:30pm, with a buffet lunch provided beforehand.

ASCLD will be assigning teams of 4 ahead of time to allow for networking and new opportunities to be presented for all participants.

You can sign up for the golf tournament through our registration system here. You will need to complete a full registration to be signed up for the tournament. The registration cost of $80/person includes 18 holes of golf, cart fees and lunch. Golf clubs can be rented for an additional charge at the course. Transportation to and from the course is not included.

See you there!

ASCLD Members: we are asking for you to send the following notice regarding a University Research and Forensic Lab collaborative workshop out to your University contacts:

Workshop - NIJ Research

Bridging the Gap Between Researchers and Practicing Forensic Scientists: The Need for Collaboration
The "Forensic Science Research Incubator"

On Sunday, April 30, NIJ is conducting an 8 hour Workshop at the ASCLD Annual Meeting to bring together University Researchers and Forensic Lab Leaders to facilitate research. Grant funding opportunities will also be presented. This workshop is an excellent opportunities to meet face to face to share ideas and forge partnerships. This meeting will also provide an opportunity to learn about the ASCLD Forensic Research initiative. Please check out the specifics at:

The meeting general information and registration is: http://www.asclds Symposium.com/ and consider attending.

Workshop NIJ Grant Managers

NIJ Programs for Forensic Laboratories
NIU Forensic Science R&D Reports for ASCLD Crime Lab Minute Vol 9

These research reports have been submitted by the National Institute of Justice (NIJ) especially for their relevance to crime laboratory activities. ASCLD has not reviewed nor does it necessarily endorse the findings of this research.

Funding Opportunity: Paul Coverdell Forensic Science Improvement Grants Program – Competitive

NIU is seeking proposals for the Paul Coverdell Forensic Science Improvement Grants Program (the Coverdell program), which awards grants to states and units of local government to help improve the quality and timeliness of forensic science and medical examiner/county medical examiner/county medical examiner/coroner’s office services. Among other things, funds may be used to eliminate a backlog in the analysis of forensic evidence and to train and employ forensic laboratory personnel, as needed, to eliminate such a backlog. This funding opportunity is only for competitive funds. **Deadline: March 10, 2017** Learn more about this and other funding opportunities for crime labs in a webinar recording available soon.

Funding Opportunity: Forensic DNA Laboratory Efficiency Improvement and Capacity Enhancement Program

Demands for forensic DNA analysis increased every year from 2009 to 2014, with a 28 percent increase in cases submitted to forensic DNA laboratories during that time period. Often, a single case submission includes requests for forensic analyses in DNA and non-DNA disciplines. Enhancing capacity and improving efficiency in the processing and testing of non-DNA evidence from cases that also involve a request for DNA analysis will ultimately reduce the backlog of DNA evidence. NIU’s Forensic DNA Laboratory Efficiency Improvement and Capacity Enhancement (E&CE) program is intended to help address that gap. **Deadline: March 13, 2017** Learn more about this and other funding opportunities for crime labs in a webinar recording available soon.

Funding Opportunity: DNA Capacity Enhancement and Backlog Reduction (CEBR) Program

The goal of NIU’s FY 2017 DNA Capacity Enhancement and Backlog Reduction (CEBR) program is to assist eligible states and units of local government to process, record, screen, and analyze forensic DNA and/or DNA database samples and to increase the capacity of public forensic DNA and DNA database laboratories. Under this
program, in general, eligible applicants are given the opportunity to determine what portion of their anticipated funding should be used for capacity building purposes and what portion should be used for analysis of forensic DNA and/or DNA database samples. **Deadline: March 13, 2017** Learn more about this and other funding opportunities for crime labs in a webinar recording available soon.

**Funding Opportunity: Strengthening the Medical Examiner-Coroner System Program**

Death investigations performed by medical examiners or coroner (ME/C) offices are vital to criminal justice. Of the 2.6 million deaths annually, ME/C offices investigate nearly 500,000 cases in approximately 2,400 jurisdictions, but many communities lack adequate personnel, infrastructure, and resources to address medicolegal death investigation (MDI) needs. NIJ’s Strengthening the Medical Examiner-Coroner System Program is a competitive program designed to enhance MDI services and increase the supply of forensic pathologists nationwide by supporting forensic pathology fellowships as well as ME/C office accreditation. **Deadline: March 20, 2017**

**Adapting Newborn Blood Testing Procedures to Forensic Toxicology**

**Degraded Ignitable Liquids Database: An Applied Study**

**Statistical Methods for Combining Multivariate and Categorical Data in Postmortem Interval Estimation**

**Citrate Content of Bone: A potential Measure of Post Mortem Interval**

A constant concern for forensic practitioners is the determination of the post-mortem interval (PMI) in questioned death cases. A number of methods have been tried to better determine PMI, but all have proven problematic. NIJ-supported researchers at the SUNY Brockport Research Foundation evaluated the citrate method for determining PMI based on a 2010 study that indicated citrate content in bone could be potentially useful in estimating PMI. The researchers intend to make the interface available free online.

**Microspectrophotometry of Fibers: Advances in Analysis and Interpretation**

Microspectrophotometry is a standard forensic laboratory technique for the comparison of fibers, however, there are concerns about its discriminating power and significance in a field that is moving toward statistical interpretation of data. In this NIJ-supported project, researchers with the
forensic laboratory Microtrace conducted an extensive review of microspectrophotometry to present investigators with a context for relating spectral differences to colorant concentrations in fibers and illustrate cases in which similar, but different, fiber populations could not be discriminated.

**Featured Article:**

His name was Wilmer Souder. A physicist at the National Bureau of Standards, now known as the National Institute of Standards and Technology (NIST), Souder played an important role in the early days of forensic science. He helped send countless murderers, bootleggers, gangsters and thieves to prison, and he kept such a low profile partly out of concern for his and his family's safety. Perhaps as a result, he was not long remembered for his forensic work, and his influence on the developing field of forensic science was not as great as it might have been.

NIST Library just finished scanning Souder's nine notebooks and has made them available for anyone to view via the NIST Digital Archives:

Establishment of an Office of Forensic Sciences and a Forensic Science Board Within the Department of Justice

Revision 2/14/17

Formed in 2000, CFSO is an association of six forensic science professional organizations: American Academy of Forensic Sciences; American Society of Crime Lab Directors; International Association for Identification; International Association of Forensic Nurses; National Association of Medical Examiners; and Society of Forensic Toxicologists - American Board of Forensic Toxicology.

These professional organizations together represent more than 21,000 forensic science professionals across the United States.

The mission of the CFSO is to speak with a single forensic science voice in matters of mutual interest to its member organizations, to influence public policy at the national level and to make a compelling case for greater

FORESIGHT 20/20
The American Society of Crime Laboratory Directors (ASCLD) has received funding from the Laura and John Arnold Foundation to develop software that will transfer data from forensic Laboratory Information Management Systems (LIMS) to FORESIGHT, a business quantitative process tailored to forensic laboratories.

The goal of the project, called FORESIGHT 20/20, will be to allow laboratories to easily upload business-relevant information from their individual LIMS to the FORESIGHT project, hosted at West Virginia University.

Federal funding for public crime laboratories and medical examiner offices. The primary focus of the CFSO is local, state and national policymakers, as well as the United States Congress.

What makes a great leader? Management theorist Simon Sinek suggests, it's someone who makes their employees feel secure, who draws staffers into a circle of trust. But creating trust and safety — especially in an uneven economy — means taking on big responsibility.

Just Science Podcast Interviews

RTI International in partnership with the Forensic Technology Center of Excellence, a program of the National Institute of Justice, Department of Justice, is producing a podcast called “Just Science”. The Just Science podcast is designed to reach a broad audience of forensic scientists and other professionals who collaborate with the forensic science community.

As part of the podcast series, RTI would like to interview any ASCLD members who would like to share interesting or unusual criminal cases, now closed or adjudicated, where forensic science was critical to the outcome of the case. Our goal is to provide the audience with a positive view of the importance of forensic science in criminal investigations. The timing of the cases is not important, although preference will be given to cases involving some personal experience and that can be the subject of an in-depth conversation. The audio only recording usually takes 40 to 60 minutes, depending on the content, and all disciplines are welcome. We would like to do the recordings during the ASCLD annual symposium in Dallas, Texas.

The available dates are Tuesday, May 2nd and Wednesday, May 3rd, and we can accommodate your schedule. Please e-mail Lauren Mangum from RTI International at lmangum@rti.org with a short overview of the case and methods used. This is a great way to disseminate your, or your crime laboratory’s work to a wide audience, hopefully sparking conversations, new ideas, and inspiring others within the field to approach cases in alternative ways here. You can change the position of the caption and set styles in the block’s settings tab.
